PROFESSIONAL SUMMARY

Versatile Java and Python AI Developer with 5+ years of experience in financial services and enterprise software environments, specializing in AI-augmented backend systems, Retrieval-Augmented Generation (RAG) workflows, and scalable microservices architecture. Proficient in Java, Python, Spring Boot, Spring AI, and OpenAI APIs to build intelligent automation and transaction-processing services using structured and unstructured data. Proven track record of partnering with engineering and product teams to drive measurable gains in system reliability, developer productivity, and operational efficiency.

TECHNICAL SKILLS

AI & Core Development: Java 17, Python, Spring Boot, Spring AI, OpenAI APIs (GPT-4, DALL-E), Prompt Engineering, pgvector (RAG / Semantic Search), GitHub Copilot, REST APIs, GraphQL, Apache Kafka, PostgreSQL, Docker, Kubernetes

Frontend: Angular, NgRx Store, React, TypeScript, HTML5, CSS3, Bootstrap

Cloud & DevOps: AWS (EKS, EC2, RDS, S3, Lambda, CDK), GCP (GKE, Pub/Sub), Azure (AKS, SQL, Cosmos DB), Jenkins, GitLab CI/CD, Terraform, GitOps

Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Azure SQL, Cosmos DB

Security & Testing: OAuth 2.0, JWT, Spring Security, RBAC, PII Tokenization, JUnit 5, Mockito, TDD, Postman, Swagger

PROFESSIONAL EXPERIENCE

Software Engineer II - PNC Bank - Dallas, TX August 2023 - Present

Java, Python, Spring Boot, Spring AI, OpenAI APIs, pgvector, Apache Kafka, PostgreSQL, AWS, GCP, Kubernetes, Docker, Jenkins, GitLab CI/CD

- Architected full-stack payment and authentication microservices using Java, Spring Boot, and Python, supporting distributed systems that process **100K+ events per second at sub-10ms latency**.
- Engineered event-driven pipelines with Apache Kafka and Spring Cloud to power real-time fraud detection and payment orchestration, cutting incident response time by **30%**.
- Integrated Spring AI and OpenAI APIs with pgvector-based retrieval to build a Retrieval-Augmented Generation workflow for transaction inquiry automation, reducing manual resolution time by **25%**.
- Automated CI/CD pipelines using Jenkins and GitLab, reducing release cycles by **45%** and deployment failures by **60%**.
- Adopted GitHub Copilot and Spring AI within a verify-before-merge development workflow, cutting routine implementation time by an estimated **20%** while maintaining code review discipline.
- Established automated test suites using JUnit 5, Mockito, and TDD practices, expanding code coverage from 65% to **92%+** and reducing post-release defects by **40%**.
- Deployed containerized microservices on Kubernetes across AWS EKS and GCP GKE, maintaining **99.9% uptime** through 3x transaction volume spikes.
- Mentored two junior engineers on API-first design and AI-assisted development practices while collaborating with onshore and offshore teams to maintain SLA commitments.

Full Stack Software Engineer - IFlex INC - Fairlawn, OH July 2022 - January 2023

Java, Spring Boot, Angular, NgRx, Node.js, Azure, Kubernetes, Jenkins, Terraform

- Delivered Java Spring Boot APIs and Angular micro-frontend components with NgRx state management, improving application scalability by **50%** and sustaining **99.95% SLA availability** through 3x traffic surges.
- Configured Node.js middleware to orchestrate REST calls between Angular micro-frontends and Spring Boot services, reducing API response time by **30%**.
- Migrated relational workloads to Azure SQL and NoSQL data to Cosmos DB, improving data accessibility by **35%** and cutting query latency by **30%**.

Full Stack Engineer - Vertocity - Hyderabad, India June 2020 - May 2021

Java, Spring Boot, MySQL, Angular, Docker, AWS

- Built end-to-end full-stack features using Java Spring Boot REST APIs and Angular, containerized with Docker on AWS EC2 and RDS, achieving 99.9% high availability.
- Resolved cross-layer defects and authored JUnit and Jasmine test suites achieving 90%+ code coverage, reducing post-deployment defects by 40%.

PROJECTS

AI-Powered RAG Microservice | Spring Boot, Spring AI, OpenAI APIs, pgvector, Kafka, Docker

- Designed a Retrieval-Augmented Generation microservice using Spring AI, OpenAI APIs, and pgvector-based semantic search, reducing inference latency by 40% and supporting 10K+ concurrent users.

Enterprise Healthcare Platform (PharmaConnect) | Angular, Spring Boot, MySQL, AWS, Jenkins

- Shipped a full-stack healthcare platform with Angular frontend and Spring Boot REST APIs on AWS, achieving 99.9% uptime and 92% test coverage with JWT-secured RBAC.

EDUCATION

Master of Science in Information Technology - Marist University, Poughkeepsie, NY | August 2021 - May 2023
