PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience in financial services, writing Java, SQL, and Python every day to build full-stack, event-driven, cloud-native platforms. Proficient in Spring Boot, React, and Angular to design REST and GraphQL APIs across relational and NoSQL data stores, with working knowledge of .NET. Proven track record of collaborating with onshore and offshore engineering teams to deliver reliable, scalable software. Hands-on with AI, building RAG workflows with Spring AI and OpenAI and using GitHub Copilot under code review safeguards.

TECHNICAL SKILLS

Backend: Java 17, Python, SQL, Spring Boot, Spring Cloud, Spring Data JPA, Hibernate, REST, GraphQL, Node.js, .NET (working knowledge)
Frontend: React, Angular, TypeScript, JavaScript, NgRx, Redux, HTML5, CSS3
Data and Messaging: PostgreSQL, MySQL, Azure SQL, MongoDB, Cosmos DB, Redis, Apache Kafka, RabbitMQ
Cloud and DevOps: AWS (EKS, EC2, RDS, S3, Lambda), Azure (AKS), GCP (GKE), Docker, Kubernetes, Terraform, Jenkins, GitLab CI/CD
Testing and Observability: JUnit 5, Mockito, Jasmine, Karma, SonarQube, JMeter, Dynatrace, Prometheus, Grafana
AI and Security: Spring AI, OpenAI APIs, pgvector, GitHub Copilot, OAuth 2.0, JWT, Spring Security, RBAC

PROFESSIONAL EXPERIENCE

Software Engineer II - PNC Bank - Dallas, TX
August 2023 - Present

Java 17, Python, SQL, Spring Boot, React, Angular, TypeScript, GraphQL, .NET, Kafka, PostgreSQL, AWS, GCP, Kubernetes, Docker, Jenkins, Terraform, Spring AI, pgvector, Dynatrace

- Architected full-stack payment and authentication features in Java, Spring Boot, and React within a microservices setup, supporting systems that process **100K+ events/sec at sub-10ms latency**.
- Engineered Kafka and Spring Cloud pipelines with idempotent consumers and dead letter retries for real-time fraud detection and payment orchestration, **cutting incident response time by 30%**.
- Implemented REST and GraphQL services with Spring Data JPA and PostgreSQL, replacing N+1 Hibernate fetches and trimming oversized payloads to **improve API processing efficiency by 30%**.
- Optimized PostgreSQL queries, stored procedures, and composite indexes written daily, checking query plans before each release and removing **4 hours per week** of manual data extraction.
- Scripted Python tools for log analysis and service health checks on Linux, saving an estimated **5 hours per week** of manual effort.
- Automated Jenkins and GitLab CI/CD pipelines with SonarQube quality gates, **reducing release cycles by 45%** and **deployment failures by 60%**.
- Deployed containerized services on AWS EKS and GCP GKE using Terraform, holding **99.9% uptime** through 3x volume spikes.
- Established JUnit 5, Mockito, and TDD suites on Spring Boot services, lifting **coverage from 65% to 92%+** and cutting defects by 40%.
- Integrated Spring AI, OpenAI APIs, and pgvector retrieval into a RAG workflow for transaction inquiries, validating model output before release and cutting **manual resolution time by 25%**.
- Accelerated routine Java and SQL implementation with GitHub Copilot, reviewing every suggestion through pull requests, SonarQube, and tests before merge, saving about **20% of routine implementation time**.
- Adopted Dynatrace dashboards and distributed tracing to monitor service health across Kafka, PostgreSQL, and APIs, **reducing mean time to detection by 30%**.
- Mentored two junior engineers on API-first design and TDD through pair sessions and pull request reviews.

Full Stack Software Engineer - IFlex INC - Fairlawn, OH
July 2022 - January 2023

Java, Spring Boot, Angular, NgRx, TypeScript, Node.js, Azure, Kubernetes, Jenkins, Terraform, JUnit, Jasmine, Karma

- Delivered Spring Boot APIs and Angular micro-frontend components with NgRx state management, **improving scalability by 50%** and sustaining 99.95% SLA availability through 3x traffic surges.
- Managed Kubernetes clusters on Azure AKS through Jenkins pipelines with blue-green releases across DEV, UAT, QA, and PROD, **cutting release cycle time by 40%**.
- Migrated relational workloads to Azure SQL and NoSQL data to Cosmos DB with row count reconciliation before cutover, cutting query latency by 30%.
- Configured Node.js middleware and Terraform scripts to orchestrate REST calls and provision Azure environments, reducing API response time by 30% under peak load.

Full Stack Engineer - Vertocity - Hyderabad, India
June 2020 - May 2021

Java, Spring Boot, MySQL, Angular, TypeScript, Docker, AWS, JUnit, Jasmine, Karma, Swagger, Git

- Built Java Spring Boot REST APIs and Angular UIs end to end, containerized on AWS EC2 and RDS for 99.9% availability.
- Resolved cross-layer defects, wrote JUnit, Jasmine, and Karma suites reaching 90%+ coverage, cutting post-deployment defects by 40%.

EDUCATION

Master of Science in Information Technology - Marist University, Poughkeepsie, NY August 2021 - May 2023
